Devices: unlock the possibilities

The challenge

The shift in working habits towards mobility is adding work at a time when most organisations are trying to reduce their IT spend.

- Lots of devices to manage, software to install and data to protect

- People want to use the device of their choice to access corporate resources – but corporate data has to be kept safe

- People expect a consistent and simple experience across all devices

- IT teams need to be technology enablers, effortlessly combining all the moving parts

It can be hard to know where to start, and the result can be:

- An IT department bogged down in administration – so they are perceived as a bottleneck and not an enabler

- Users getting access they shouldn't and not getting access they should

- Piles of shiny new devices boxed but not ready to go

- Not being fully in control

Losing a device can be hugely inconvenient, but the consequences of the associated data loss can be very serious.

An enterprise mobility solution with device management at its heart can both enable users to access data and services on their devices, and allow IT to stay in control with pre-defined policies for which users and which devices can access which corporate resources. Users can simply connect.

The solution

Enterprise Mobiltiy Suite (EMS) offers a comprehensive solution for device management, identity and access management and data protection. It's not just a point MDM approach.

enable people

- A consistent experience across devices

- Pre-defined policies and profiles - devices are ready to go

- Single-sign-on and self-service for passwords

- Appropriate policies for personal and corporate devices

unify your environment

- A single approach for management of policies and controls across all your device estate with centralised reporting

- Wide platform coverage with true heterogeneous device management (Windows, IOS, Linux, Mac etc.)

- System Center extended to the cloud with Intune – single pane management

- Integration with SaaS apps like Office 365

protect data

- Conditional access based on user's identity, device & location

- Step-up multi-factor authentication

- Selective and full device wipe capabilities

- Control of where data is stored on devices

- Encryption to protect high impact data on the move

We can't stop the explosion of devices (and we wouldn't want to) but we can put in place the policies and management features that allow you to stay in control.

Windows Intune

Single admin console

System Center 2012 Configuration Manager

IT

Devices and platforms

Windows RT, Windows Phone 8, iOS, Android

Windows PCs

Mac OS X

Devices: unlock the possibilities

About Enterprise Mobility Suite

Microsoft's Enterprise Mobility Suite (EMS) enables us to provide the powerful, unified solution you need for enterprise mobility, using a comprehensive set of technologies including Azure Active Directory Premium, Identity Manager, Windows Intune and Azure Rights Management.

These technologies are designed to work seamlessly together and combine elegantly with your existing Microsoft investments to ensure all the moving parts work in sync.

We like it because it offers organisations a trio of essentials:

- **Hybrid identity** Provide your users with appropriate and secure access to your systems and data, wherever they are, through unified management of their identities, on-premises and in cloud. A single identity for each user, with flexible authentication mechanisms, and centralised policies and reporting, keeps users productive, while you stay in control.

- **Device management** Make it possible for people to use the devices they love, but stay in control of your corporate data, integrating device management across your device estate, on-premises and in cloud, from a single pane.

- **Information protection** Strike the right balance between ease of access and protection, using an additional layer of security for sensitive information so that you can safely make it available to users on devices that are outside your immediate corporate control.

Make enterprise mobility a reality in your organisation.
Call us now +1 877 862 1617

Join us for a discovery workshop

At a discovery workshop, we'll find out about the current situation of your systems and services, and where you'd like to be right now and in the future. Then we can give you options and help you develop a roadmap. Next we can help you plan, develop and implement the solution you need.

A discovery workshop usually takes 2 to 5 days depending on the size and complexity of your organisation.

About Oxford Computer Group

Oxford Computer Group (OCG) works with organisations to create complete enterprise mobility solutions. We take a strategic approach to managing user identity and data protection that's vital for user agility and ensures all the moving parts interact seamlessly.

OCG's early adoption of and involvement in Azure AD, our deep identity heritage and experience of MDM makes OCG the 'Go To' company for enterprise mobility.

Since 2002 we have worked with more than 700 enterprises worldwide. We have already worked with - and are working with - a number of organisations to create enterprise mobility solutions. We can do the same for you, whatever your company does and wherever you are in the world.

"We wanted something that would allow us to have the heterogeneous environment where we could manage all of them, and that's what led us to Intune. ... It manages not only our Surfaces but the other mobile devices that we had onsite.

"The whole process [*of working with OCG]* has been seamless. It was a very, very good experience".
