

Enterprise mobility discovery workshop

Take the first steps towards enterprise mobility. Our discovery workshop will help you understand how to enable people, manage devices and protect data

Mobility can make a workforce more flexible and productive. It can change how we do business. Forward-thinking, innovative companies can now allow their employees to connect with customers in new ways and offer new products and services, differentiating themselves from their competition.

Background

Enterprise mobility means protecting your organization's data in a way that allows end users to be productive on almost any device in any location.

Typically, tactical solutions are deployed to meet very specific needs, for example to manage your mobile devices, or user identities. While this approach solves an immediate problem, it can cause unforeseen knock-on effects, and increase operational, licensing and training costs.

Microsoft's approach to enterprise mobility is a unified solution to address all the challenges. It allows your workforce to continue using familiar applications on any device and in any location. And it embraces the three main areas of enterprise mobility; hybrid identity, device management and access and information protection.

The discovery workshop

Our **enterprise mobility discovery workshop** helps you understand the technology, the challenges, the solutions and how to get it all done. It's a series of interactive sessions that considers these challenges in your specific environment. We aim to understand how your users consume data, what applications and services they use and the types of devices that they use.

We look at managing user identities and how you can achieve a single set of credentials for your users so they can access all their applications and services on the devices they choose. And we'll help you understand how you can manage those devices.

We will look what the technology within Microsoft's Enterprise Mobility Suite (EMS) offers.

The workshop is a series of discussions over a period of two days and will involve business and technical stakeholders from your organisation and our consultants.

Discover the powerful potential and flexible, cost-effective benefits of an enterprise mobility solution.

After the workshop we produce a report giving suggestions and recommendations, and a customized roadmap for your organization. You'll understand what's possible and the effort and cost involved.

Agenda

A typical agenda is described here but can be tailored to suit your specific needs and interests:

Day One

Cloud Identity

- Provisioning
- Self-service
- SSO
- Applications

Authentication

- MFA
- ID/Password
- Certificate

Hybrid Identity

- Integration of on-prem and cloud identity

Day Two

Azure Services

- Virtual machines
- Web services
- Others

Device Management

- Cloud only
- Unified
- Capabilities
- Deployment

Enterprise mobility discovery workshop

Take the first steps towards enterprise mobility. Our discovery workshop will help you understand how to enable people, manage devices and protect data

Workshop report

The report will

- summarize the recommendations and suggestions made during the workshop
- show a clear understanding of your goals and objectives
- contain a roadmap for the implementation of your enterprise mobility solution showing various technical components required at each stage together with the effort and pre-requisites for the implementation of each component

Benefits

- Gain a clear understanding of what's involved in creating an enterprise mobility solution
- Understand the components within EMS
- Get expert advice on how to approach the challenges and avoid the pitfalls
- Get the information you need to help you plan for your enterprise mobility strategy in a roadmap
- Understand the effort, cost and pre-requisites for the deployment of each component

What next?

Let us guide you through the process of deploying a world-class enterprise mobility solution. Take advantage of our skills and extensive experience, let us be your trusted technology partner.

We'll go at the pace that's right for you, tackling the elements in order of priority for your organization, perhaps with an initial pilot project. Or we can work together to create a full-on solution. In all cases we work in clearly defined phases.

In this age of cloud and mobility, here's an opportunity for your business to increase productivity and make your end users happy on the devices they love.

Our customers value our workshops for the knowledge they gain, our expert guidance and clear documented results.

About Oxford Computer Group

We are known globally for our technical expertise. Since 2002 we have helped more than 700 enterprise customers manage their identity and device management challenges. We won Microsoft's prestigious Partner of the Year for Identity and Security for the second year running in 2014.

We work with organizations to fine-tune their enterprise mobility requirements and create a comprehensive solution.

Crucially, we do not just focus on device management. Rather we take a strategic approach to managing user identity and data protection; vital for organizations to provide the agility their users demand, to work anywhere from any device, while protecting their corporate assets and driving significant cost savings.

Get the unified solution for people and devices you need.
