

Identity is the new perimeter!
Stay in control and be confident
you understand your company's
identity-based risk profile.

Identity Governance

Strong identity governance protects your organization from diverse and increasing threats to digital identities

- ✓ I want to understand the overall identity environment across the whole of our organization.
- ✓ I can't see identity-related risks.
- ✓ Compliance audits are manual, overly expensive and produce nasty surprises.
- ✓ We need to get a grip on the many SaaS applications in our organization.
- ✓ I need to be able to detect cross-application segregation of duties violations and know if they're benign or malicious.
- ✓ Campaign-based attestation is expensive, confusing to data owners, and permits inappropriate access for too long.
- ✓ Adoption of IaaS and PaaS platforms has moved datacenter workloads beyond our corporate network and into the cloud, and I need to know they're secure.
- ✓ We approve access to data based on inadequate knowledge of policies, which sometimes leads to inappropriate access.

If identity is new perimeter then identity governance is the foundation for a secure enterprise

What we can do for you

Oxford Computer Group creates and manages secure and compliant identity governance solutions. We can:

- Design, build and deploy a comprehensive, enterprise-wide identity governance infrastructure so that your organization can effectively balance identity risk.
- Develop a target enterprise governance program focused on critical business applications.
- Conduct an identity governance assessment of whole enterprise. Or we can review specific application such as O365 and Epic or IaaS/PaaS environments such as Azure.

What you get

- A current view of the overall effectiveness of your enterprise identity environment.
- Make better business decisions using a risk-based, threat-aware, intelligence-driven identity analytics engine.
- Reduce audit costs and the chance of nasty surprises with automated analytics.
- Users get timely, appropriate, and policy-compliant access to corporate resources
- Risk-based access approvals.
- Preventative Segregation of Duties - automatically deny access requests when they conflict with SoD policies.
- Manage identity risk across the enterprise.
- Near real-time remediation of risk and policy violations.

Why choose Oxford Computer Group?

- **Track record** For more than 10 years, we've provided identity management services to organizations large and small including a number of Fortune 1000 firms.
- **Expertise** Our identity experts have deep and broad expertise and are thought leaders in the field.
- **Award-winning** We have won Microsoft's Partner of the Year award seven times, and been finalist ten times.
- **World-Class Partners** We partner with world's best identity governance solution provider.
- **Value** A high proportion of our business is from repeat customers who value our deep understanding of their business goals and identity environment.
