How do I get the **security and agility** my organization demands?

OXFORD
COMPUTER GROUP

Get Expert Answers Fast with an
Identity and Access Envisioning Workshop

Security based on notions of outside and inside are all but useless today. Now, identity is the perimeter. With identity as the beating heart of your enterprise, you can stay secure, flexible and in control.

A properly managed identity system in your enterprise will do so much more than just help you manage your IT and user permissions. It is what stands between you and the people who would attack your organization. Identity management is therefore not only sensible, it is essential.

Start with Oxford Computer Group Identity and Access Envisioning Workshop.

An envisioning workshop is a series of discussions over a few days (depending on the size and scale of your business), and will involve business and technical stakeholders from your organization meeting our technical architects and business consultants.

We look in detail at your business goals, your current infrastructure and working practices, and aim to understand what can be done more efficiently. We consider software, hardware, security, scalability, future-proofing, budget, regulations and legal compliance.

And then we propose solutions!
