MXDR Services Powered by Microsoft Security

Proactive hunting, detection, and response across your organization's infrastructure.

February 2023, version 1

Stay on top of evolving security challenges

As cybersecurity threats become more pervasive and sophisticated, organizations need solutions that provide end-to-end security across identities, data, endpoints, infrastructure, and networks.

Primary challenges

Organizations today are managing a growing volume of data and alerts while dealing with tight budgets and vulnerable legacy systems.

Ideal solution

OCG's MXDR Services will help you broaden and modernize your organization's security, threat protection, and remediation response strategies, without the expense of dedicated security staff.

Desired outcomes

Vastly improve enterprise cybersecurity as OCG's experienced consultants, alongside real-time threat monitoring, take targeted steps on your behalf to prevent and remediate even the most sophisticated threats.

OXFORD COMPUTER GROUP

Unify XDR and SIEM for end-to-end security.

SIEMs like Sentinel aggregate large quantities of data and identify security threats and unusual behavior - but they can't remediate threats. XDR responds to threats and works WITH the SIEM as part of your security portfolio, taking advantage of the broad data the SIEM solution make available.

Microsoft Sentinel

→ Sentinel is a SIEM (security information and event management) solution that provides visibility across your entire organization.

Microsoft 365 Defender

→ Secure your end users and stop attacks across your Microsoft 365 workloads.

Microsoft Defender for Cloud

→ Secure your multicloud and hybrid environments with comprehensive security across the full lifecycle.

Oxford Computer Group's MXDR Services, Powered by Microsoft Sentinel and Microsoft Defender

OCG has over two decades of experience implementing identity and security workloads and providing managed services. Our MXDR Managed Services bring together Microsoft Sentinel, Microsoft Defender for Cloud, and Microsoft 365 Defender to manage threat detection and response across your enterprise platforms.

Proactive Monitoring

Use data to understand risks. Secure identities and data, monitor suspicious logon activities, and protect against compromised credentials.

Incident Management

Identify and remediate security events faster with automated processes.

Continuous Process Improvement

Act on incident data to improve security processes.
