

Improve your institution's security posture with 24/7 monitoring and threat remediation across your IT infrastructure.

OCG's eduSOC Managed Services helps education institutions stay on top of evolving security challenges to protect identities, data, endpoints, infrastructure, and networks.

These challenges often include:

- Monitoring security for internal and external users, including students, faculty, staff, alumni, and retirees.
- Managing complex role assignments, including dual roles
- Application and device management and security
- Protecting identities and preventing phishing
- Addressing rapid account turnover and subsequent stale accounts
- Limited IT resources

Institutions need to protect student, staff, and restricted data while ensuring productivity. These challenges are often compounded by remote learning and insider threats from non-savvy users.

Alleviate Burden and Mitigate Risk

Managed services from OCG can help your institution improve your security posture and prevent future breaches.

- Additional resources from OCG can ensure security alerts are addressed without hiring new employees
- Gain visibility with a unified view of security incidents
- Get experienced resources at a lower cost
- Enable more identity and security workloads with the added coverage and knowledge from OCG consultants

We work with our customers to understand your priorities and goals. Our managed services can help maintain and evolve your IT processes to improve your security posture.

What is eduSOC?

OCG leverages Microsoft identity and security solutions and our extensive experience working with education institutions to help our customers address pervasive and evolving cyber threats.

Collect data at cloud scale - across all users, devices, applications, and infrastructures, both on-premises and in multiple clouds.

Detect previously uncovered threats and minimize false positives using analytics and unparalleled threat intelligence with Microsoft Sentinel and Microsoft's Defender suite.

Investigate threats with AI and hunt suspicious activities at scale, leveraging Microsoft's trusted cybersecurity solutions.

Respond to incidents rapidly with built-in orchestration and automation of routine tasks.

Why choose Oxford Computer Group?

We have specialized in Microsoft identity solutions for nearly two decades and have been helping education customers implement and improve identity and security solutions for just as long.

We are a member of the Microsoft Intelligence Security Association (MISA) and are a 2024 finalist for Identity Trailblazer in the Microsoft Security Excellence awards.
